

Swiss Standard Classification of Occupations 2000 - SSCO 2000

Description

The SSCO 2000 groups together individual occupations (the occupational database of the Federal Statistical Office currently contains 20,000 individual occupations) and its structure was oriented in a manner similar to that of economic branches (e.g. construction professions, health care professions, etc.). Statistics on learnt or practised professions gathered from various surveys were presented on the basis of the SSCO 2000.

Current version being used:

This nomenclature is abandoned and replaced by the Swiss Standard Classification of Occupations (CH-ISCO-19).

Revision:

Main changes between SSCO 1990 and SSCO 2000: There are now 9 Divisions of professions, which allows for a higher degree of aggregation of mini-census data. SSCO classification also takes into account new professions in the Information and Communication Technologies (ICT) field

Methodology

Structure:

Division (one digit), Class (two digits), Group (three digits), and Type (five digits)
