## SLFS 2019 in brief

The Swiss Labour Force Survey

Schweizerische Eidgenossenschaft  
Confédération suisse  
Confederazione Svizzera  
Confederaziun svizra

Swiss Confederation

Federal Department of Home Affairs FDHA  
Federal Statistical Office FSO

## 1 About the survey

Since 1991, the Federal Statistical Office (FSO) has conducted the Swiss Labour Force Survey (SLFS) at the behest of the Federal Council. The SLFS is carried out on a representative sample of the population (120 000 annual interviews). From 1991 to 2020, the interviews only took place by telephone. As of 2021, the survey will mainly be conducted by internet but respondents may still answer by telephone if they wish to do so. Thanks to the application of international definitions, the SLFS helps to position Switzerland in the international context of unemployment and employment.

### **The questions asked**

The questions mainly concern the labour market situation (current or previous employment, unemployment, retirement, working conditions, occupation, salary, job seeking, professional mobility), education and training (including continuous education), household composition and demographic characteristics.

### **Use of data from the SLFS**

The SLFS data are of great interest in terms of social and labour market policies. The survey provides information on difficulties in finding employment, reintegration into the labour market, childcare, wage inequality, retirement behaviour and the integration of the foreign population. The SLFS is a survey that is essential for the Swiss statistical system. It is the main source for employment statistics, work volume statistics used to calculate labour productivity, labour market accounts and forecasts of the economically active population in the context of the demographic scenarios.

### **Legal bases and data processing**

The protection of data is guaranteed by the Federal Statistics Act (RS 431.01), by the Ordinance on the Conduct of Federal Statistical Surveys (RS 431.012.1) and by the Federal Act on Data Protection (RS 235.1). The employees of the FSO and of the institute commissioned with carrying out the survey are strictly bound by official secrecy and subject to these laws. The data collected in the survey are processed anonymously since they are aggregated, extrapolated and finally expressed in a general way that does not allow persons who took part in the survey to be identified.

## 2 Conduct of the survey

You have been randomly selected from the FSO's sample register. The FSO's sample register is based on the official communal and cantonal registers. Only persons aged at least 15 can be chosen for the survey.

### How does the interview take place?

The FSO shall inform the persons selected at random in writing about the objectives and implementation of the SLFS. In this letter you will find a link, your username and a password to access the **online questionnaire**. You can also use your smartphone to scan the personalised QR code found on your letter, giving you direct access to your questionnaire.

Online questionnaire: [www.eLabour.ch](http://www.eLabour.ch)

The questionnaire is optimised for use on a **smartphone**, but it also works on a **tablet** or **personal computer**. The questionnaire is available in English, French, German and Italian. If you prefer to answer **by telephone**, simply contact the LINK Institute, commissioned by the SFO to conduct the interview on the freephone number: 0800 511 411. Computer-assisted telephone interviews are conducted by professional interviewers who are themselves managed by supervisors.

### Everyone's participation is important

Participation in this survey is voluntary, but your collaboration is very important for the relevance and quality of the study. We need your answers regardless of your age, nationality or employment status (employed, unemployed, retired, at home, in training, or other economically inactive status).

### Any questions?

If you have any questions regarding the conduct of the survey, if you wish to inform us of any change to your contact details or make an appointment to carry out the interview, please contact the LINK hotline for the SLFS on **0800 511 411**. You can also send an email to the following address: [hotline.sake@bfs.admin.ch](mailto:hotline.sake@bfs.admin.ch) or take a look at our website: [www.slfs.bfs.admin.ch](http://www.slfs.bfs.admin.ch).

### 3 Main results of the SLFS

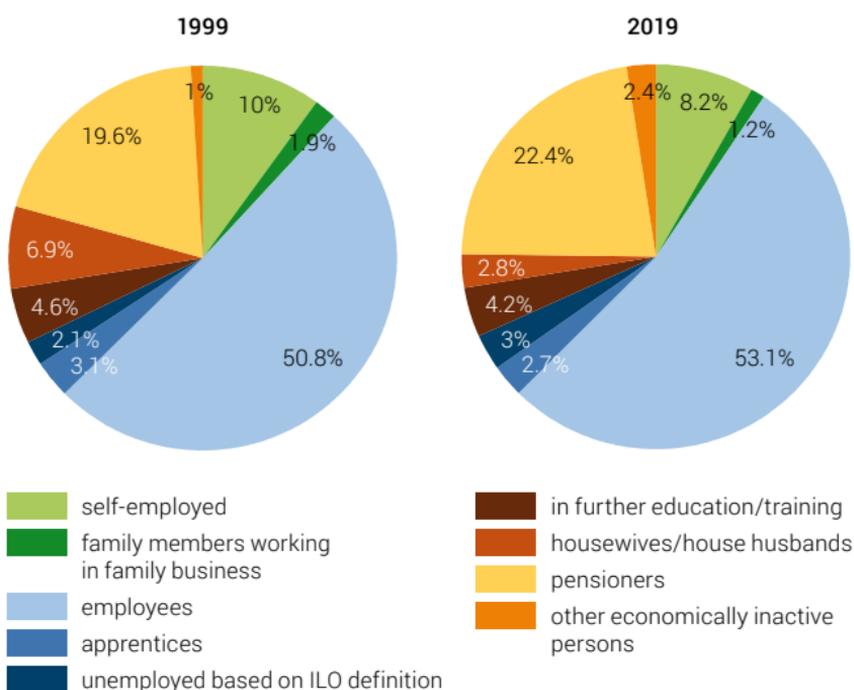

#### Composition of the permanent resident population

The Swiss population is made up of economically active persons and economically inactive persons. Economically active persons – which represent the labour supply – include employed persons (the self-employed, family members working in a family business, employees and apprentices) and the unemployed as per the definition of the International Labour Organisation (ILO). Economically inactive persons are made up of persons in education, homemakers of both sexes and pensioners.

Over the last twenty years, the share of economically active persons in the population aged 15 and over has remained stable despite sharp demographic ageing (68% of economically active persons in 2019 and in 1999). Within the economically active population, the shares of self-employed and family members working in a family business have fallen while the proportion of employees has risen. Among economically inactive persons, the share of pensioners has risen sharply at the expense of the share of homemakers.

#### Employment status<sup>1</sup>

Of the Swiss resident population aged 15 or over

<sup>1</sup> Sociological definition: employees in their own business count as self-employed.

## Labour force participation in Switzerland and in Europe

In the fourth quarter 2019, the activity rate of the population aged 15 and over reached 68.1% in Switzerland, one of the highest rates in Europe. Only Iceland (79.9%) registered a higher activity rate. Switzerland's neighbouring countries recorded considerably lower rates (Germany: 62.6%, Austria: 61.4%; France: 55.5%, Italy: 49.9%). Alongside Italy, Croatia (51.3%) and Greece (51.6%) had the lowest rates in Europe. The EU-28 average was 58.3%.

## Part-time work

Part-time work (employment rate below 90%) has risen sharply in Switzerland over the past 20 years and now accounts for more than a third of employed persons.

It mainly concerns women, who in 2019 accounted for 74.8% of part-time employed persons (1.316 million compared with 443 000 men). Childcare and other family responsibilities are the main reasons cited for part-time employment.

Among these, 357 000 were underemployed, i.e. they would have liked to work more and were available to do so in the near future. The underemployment rate was 7.3% of the economically active population.

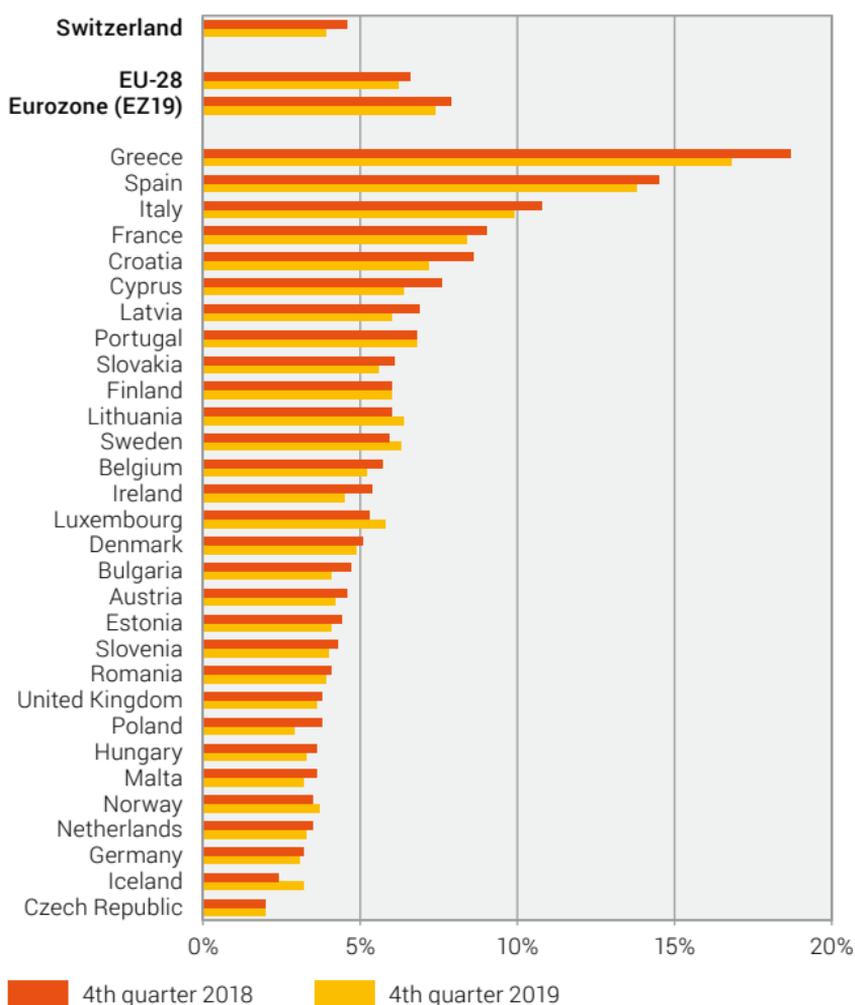

## Persons employed part-time according to gender

## Unemployment in Switzerland and Europe

In the 4th quarter 2019, 192 000 persons were unemployed in Switzerland as defined by the International Labour Organisation (ILO), i.e. 34 000 fewer persons than one year previously. These unemployed persons represented 3.9% of the economically active population, a lower share compared with the 4th quarter 2018 (4.6%). Between the 4th quarters of 2018 and 2019, the unemployment rate declined in both the European Union (EU-28: from 6.6% to 6.2%) and the Euro zone (EZ19: from 7.9% to 7.4%).

## Unemployment rate as defined by ILO (age 15–74), in Switzerland and EU and EFTA states

(Situation on 16.06.2020)

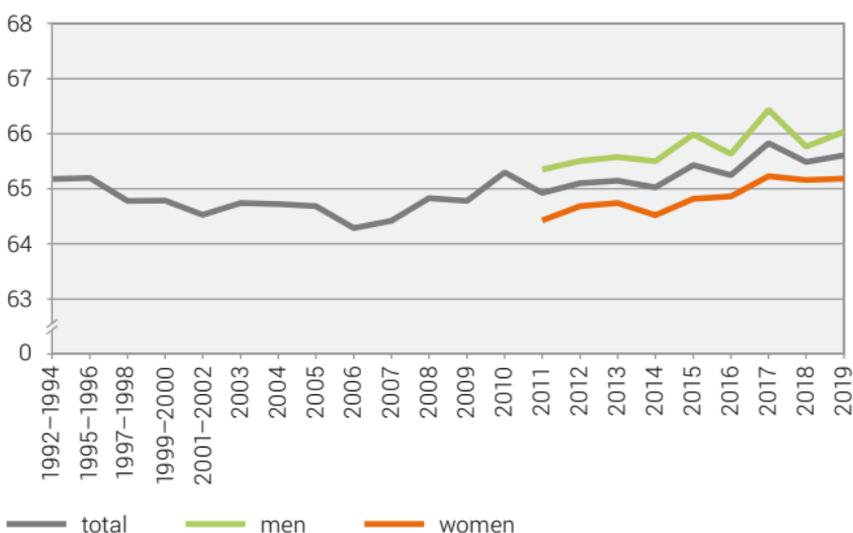

## Employment and retirement

The activity rate (share of professionally active persons) decreases with age from 50 onwards. While 91% of men and 81% of women were still active in the labour market at the age of 57 (period 2015–2017), the activity rate was only 52% for men aged 64 and 46% for women aged 63. 33% of men and 28% of women of retirement age (65 and 64 respectively) were still active in the labour market. The population aged 74 also included working people (14% of men; 6% of women).

The average age on leaving the labour market was 65.6 years in 2019. This is one of the highest ages since the early 1990s. Men leave the labour market on average slightly later than women (66.0 versus 65.2).

In 2019, the number of persons aged 65 or more per 100 economically active persons aged 20 to 64 was 35.2. Over the past 10 years, demographic ageing has led to a rapid increase in this ratio despite growing labour force participation: in 2009 there were only 31.5 persons aged 65 or older per 100 economically active persons aged 20 to 64.

### Average age on leaving the labour market<sup>1</sup> by sex<sup>2</sup>

<sup>1</sup> exits = changing from employment of at least 1 hour per week to no employment. Persons leaving aged 58–75 years.

<sup>2</sup> due to sample size, men and women can only be distinguished from 2011 onward.
