

## Appendix Coherence - annual

Generally speaking, the comparison between the results of SILC19 and SILC20 shows excellent consistency between the two years. The results are similar for 2019 and 2020, regarding both the average of all households (table 1) as well as the percentage and the average of households receiving a sub-component (table 2), with the exception of the variable HY090G *Interest, dividends, profit from capital investments in unincorporated business* which only represent a minor part of total income. This decrease in rate of households receiving HY090G has been observed since SILC17.

**Table 1 Comparison SILC19-SILC20.** Average, confidence interval of income sub-components for all households (with or without income) with weightings, in CHF. Components for which averages with confidence intervals of 95% do not correspond are outlined in red.
