

UTE: Incoming mobility rates by host and original higher education institution, 2021/22

Only original higher education institutions that contribute at least 0.4% to incoming mobility are shown. All other institutions are included in the category «other».

The PH SZ, the PH ZG, the PH SH, the PH GR and the SHLR are not included in the graph, as they have no incoming mobility.

Data was collected at the UIT and UTE only. However, all course credits of incoming students from Switzerland were recorded, regardless of the type of the original higher education institution. For this reason, the data of UAS students are also shown in the graph.
