What is quality of life?

The concept of quality of life is used to measure the well-being of the population in its various dimensions. Originally developed by the OECD, it has been adapted to Switzerland's specific situation and includes eleven mutually dependent dimensions relating to material living conditions but also to the subjective perception of quality of life, itself a factor in a city's attractiveness.

Each dimension of quality of life is illustrated by one to four indicators taken from the City Statistics data. A brief overview is given here with just one indicator for each dimension. You can find all 29 City Statistics indicators and additional informations on our website www.citystatistics.ch → Quality of life indicators or by scanning the QR code below.

City Statistics

Based on some 200 indicators, the City Statistics provide information and points of comparison on several aspects of living conditions in European cities and their larger urban zones. Basel, Bern, Geneva, Lausanne, Lucerne, Lugano, St. Gallen, Winterthur and Zurich are the Swiss cities taking part in this project that is also supported by the Federal Office for Spatial Development (ARE), the Federal Housing Office (FHO) and the State Secretariat for Economic Affairs (SECO).

City Statistics is a European project with Switzerland's participation and which provides data on living conditions in over 900 European cities. The data collected are available on the database of Eurostat, the European Union's statistical office. Find out more about the City Statistics project at European level on the Eurostat website: www.ec.europa.eu/eurostat → Data → Statistical themes → Regions and cities → Cities → Information on data or by scanning the QR code below.

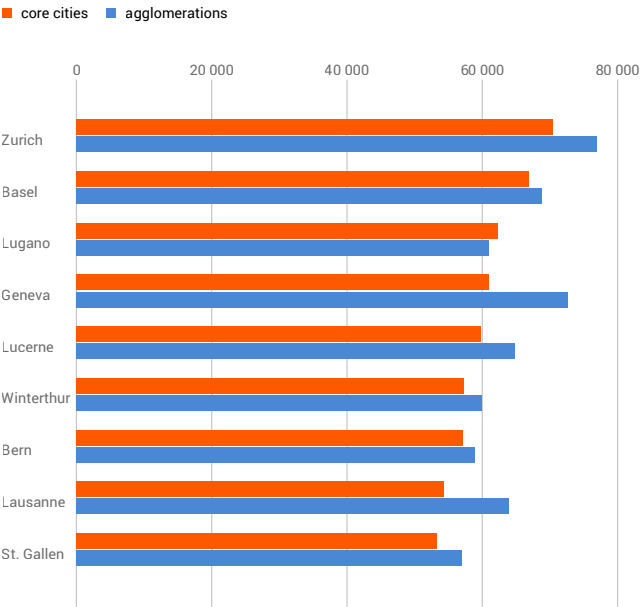

Income and Jobs

Income and jobs allow people to cover their basic needs and provide opportunities to fulfil personal wishes. They allow people to accumulate wealth, helping them to be more resistant in times of economic crisis.

Income per taxpayer, 2020

Average taxable income for direct federal tax, per taxpayer in CHF

Data as on: 23.01.2024

Source: FTA

© FSO 2024

The average taxable income of natural persons describes the average material situation of the population. Sufficient income enables people to cover their basic needs such as food, housing and health-care. It has an influence on quality of life in that it can provide some room for manoeuvre to cover material needs. Sufficient income enables people to manage their personal resources by continuing their education, to provide childcare or to access culture and leisure activities, for example.

Other indicators of this dimension: economic activity rate; social assistance rate; unemployment rate.

Housing Conditions

Good housing conditions meet the basic needs of people for safety, feeling of protection, privacy and personal space. However, housing costs can take up a large part of a household's budget, limiting expenditure on other areas.

Traffic noise, 2015

Share of the population disturbed in the night by > 55' decibels

■ core cities ■ agglomerations

¹ european thresholds

Data as on: 23.01.2024

Source: FOEN – SonBase

© FSO 2024

Traffic noise at night is harmful to one's sleep and can negatively affect health and satisfaction with housing conditions. In addition to noise from road traffic, trains and aeroplanes can also be a nuisance.

Other indicators of this dimension: area of living; overcrowded dwellings; dwelling vacancy rate.

Health

Health is one of the most valuable aspects of a person's life. It enables active participation in social life and in the labour market. Health is also influenced by a good work-life balance as well as high environmental quality.

Mortality rate of under 65 year-olds

Crude mortality rate due to diseases of the circulatory or respiratory systems per 100 000 inhabitants, average from 2018 to 2021

■ core cities ■ agglomerations

Data as on: 23.01.2024

Source: FSO – eCOD

© FSO 2024

Deaths under the age of 65 can have many causes, such as genetic factors, accidents, individual health behaviour or the quality of the local environment. The discrepancy between men and women can be linked by men's greater consumption of tobacco and alcohol as well as a higher occurrence of obesity in men.

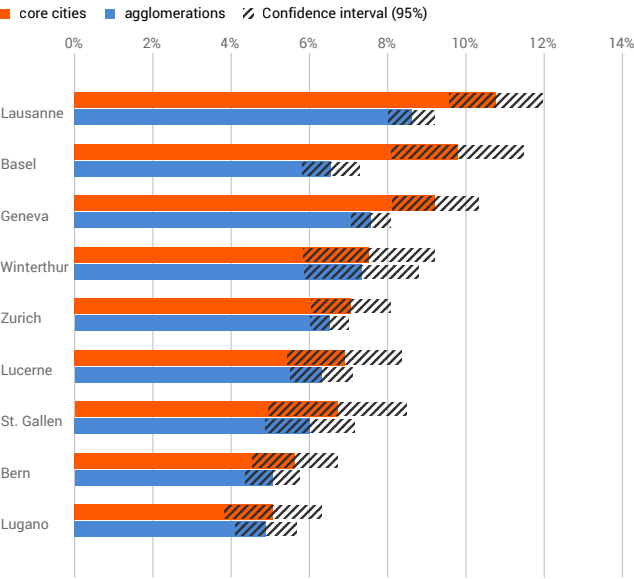

Other indicators of this dimension: practising doctors; suicide rate.

Education

Education opens opportunities for development and helps people to better cope with social and economic changes. Prospects on the labour market and the possibilities for professional fulfilment and advancement are to a large extent determined by education.

Young people outside the education system, 2018 – 2022

18-24-year-olds without post-compulsory education who are not in formal education and training, as a % of the permanent resident population of the same age, cumulative data¹

¹ Cumulated data over 5 years are used to achieve sufficient quality.

Data as on: 23.01.2024
Source: FSO – RS

© FSO 2024

Young people leaving the education system without an upper secondary level diploma are a potential risk group, as their prospects on the labour market are very limited and their integration in society is more difficult.

Other indicator of this dimension: educational attainment.

Environmental Quality

Many people appreciate pleasant and natural surroundings in their place of residence and for their leisure time. Both are influenced by the quality of the local environment. An environment that is contaminated with pollutants and noise affects the mental and physical health of the population.

Long-term pollution index, 2021

Population weighted mixed index of air quality¹, in the core cities

¹ based on concentrations of particulate matter (PM10), nitrogen dioxide (NO₂) and ozone (O₃). The index shows the average air pollution of towns and cities from level 1 "low" to 6 "very high".

Data as on: 23.01.2024

Sources: FSO, FOEN

© FSO 2024

The long-term pollution index shows the average air pollution of towns and cities. Chronic pollution by air pollutants such as particulate matter, nitrogen dioxide and ozone has a direct impact on human health and the environment. This may result in respiratory diseases such as bronchitis as well as an increased risk of cancer.

Other indicator of this dimension: land use.

Personal Security

Personal security is primarily influenced by crime, the risk of traffic accidents and natural hazards. Crime may lead to a loss of possessions, physical suffering, stress and anxiety. It may also influence residents' feeling of security.

Burglaries in dwellings, 2022

Number of burglaries with intrusions¹ in dwellings per 1000 inhabitants

¹ including burglaries in cellars, outside storehouses and other annexes (incl. attempts)

Source: FSO – PCS

© FSO 2024

Burglaries do not only result in damage of property for victims but also often mean that people no longer feel secure in their own homes. This may limit their daily activities.

Cities are often a node of human activity which has to be considered when interpreting the indicators of this dimension.

Other indicators of this dimension: violence; road accidents.

Civic Engagement

By taking part in political and social life, citizens express their needs, making a democratic contribution to political decisions. This ensures that citizens are better informed and more easily accept political decisions. Civic engagement strengthens people's trust in institutions and increases the effectiveness of political action.

Participation in federal votes and elections to Parliament

Average rate from 2019 to 2022, in the core cities

Data as on: 23.01.2024

Source: FSO – Statistics of votes and elections

© FSO 2024

Citizens aged 18 or over have the opportunity several times a year to decide on constitutional texts and bills at federal level.

Work-Life-Balance

A good work-life-balance influences well-being, contributes to productivity in the workplace and helps people to remain healthy and happy.

Availability of child care for infants, 2022

Total places for children of pre-school age, per 1000 children in this age group, in the core cities

¹without day-childcare

²without private day-childcare centers

Data as on: 23.01.2024

Source: FSO – City Statistics

© FSO 2024

External childcare enables families to reconcile family responsibilities with their work commitments.

However, the data do not show, how many of the children in day care come from the respective core city. A high number of children in day care per resident children could also be explained by childcare provided for children whose parents work in a certain core city but who do not live there. This applies particularly to children in company day-childcare centers.

Other indicators of this dimension: part-time employment; duration of commute.

Mobility

Mobility is often necessary for work and leisure activities. For many people a good transportation network is important to satisfy needs such as shopping, education and recreation.

Price of a monthly public transport ticket, 2022

For journeys of 5 to 10 km in town centre, in CHF

Data as on: 23.01.2024

Source: Alliance Swissspass

© FSO 2024

Connecting residential areas and employment premises with public transportation is part of a sustainable, urban mobility management. As such it makes a considerable contribution to the quality of life.

The price of a monthly public transport ticket describes the costs an individual has to pay for using public transportation. With this variable, however, it must be noted that the offer in the transport network is not considered.

Other indicators of this dimension: choice of transportation mode to work; public transportation stops.

Culture & Leisure

Cultural offers enable the maintenance of social contacts, the development of networks and offers possibilities for recreational activities. Culture and leisure also includes clubs and sport facilities.

Cultural offering, 2022

Number of museums, theatres and cinemas per 100000 inhabitants¹, in the core cities

¹ The fact that cultural facilities often have several exhibitions/stages/screens is not considered.

² Data 2021, updated every 2 years.

³ only theaters with regular subsidies from the city

Sources: FSO – SSCin, Swiss museums statistics and City Statistics; City Statistics Partners © FSO 2024

The offer of museums, theatres and cinemas indicate a city's possibilities for cultural leisure activities.

Other indicators of this dimension: cinema seats; demand of museums and theatres.

Infrastructure & Services

The infrastructure & services offer codetermines a location's attractiveness. It can vary quite considerably from city to city, having an impact on the material aspects of quality of life. This includes, for example, residential and workplace infrastructure with an attractive environment, good accessibility, and also tax incentives.

Accessibility of services for the population, 2018

Mean distance¹ to the closest service, in the core cities

¹ Distances calculated based on road network, in meters.

Source: FSO – Services for the population

© FSO 2024

Additional information

Data: in City Statistics, data from the Population and Households Statistics (STATPOP), the structural business statistics (STATENT), the Buildings and Dwellings statistic (BDS), and the Structural Survey (RS) from reference year t are surveyed as December or at 31 December of year t-1 in order to comply with Eurostat directives.

For data taken from the Structural Survey (RS), it should be noted that this is a sample survey with varying confidence intervals that can be found on the FSO website, along with the data.

Perimeter: the perimeter for the agglomerations corresponds to the FSO's 2012 definition.

The Federal Statistical Office (FSO) leads the City Statistics project for Switzerland and implements it in collaboration with:
