Employment barometer in the 4th quarter 2024

Slight increase in employment in 4th quarter 2024

In the 4th quarter 2024, total employment (excluding agriculture) in Switzerland rose by 0.9% compared with the same quarter of the previous year (seasonally adjusted, +0.1% over previous quarter). Enterprises reported 17.1% fewer vacancies than a year earlier. Difficulties recruiting personnel have declined slightly. In addition, the employment outlook remained positive despite enterprises' cautious estimates. These are some of the latest findings from the Federal Statistical Office (FSO).

Enterprises in Switzerland reported 5.534 million jobs in the 4th quarter 2024. This was an increase of 48 300 jobs (+0.9%) year on year. Women made up 46.7% of the workforce. At the end of 2024, 2.281 million jobs were part-time (women accounted for 69.3% of these jobs). In full-time equivalents, the total volume of employment was 4.315 million jobs. This was 40 800 full-time equivalents more than the previous year (+1%).

Secondary sector employment (industry and construction) rose only slightly in the 4th quarter 2024 compared with the same quarter of the previous year by 6700 jobs (+0.6%) to 1.131 million jobs. The tertiary sector (services) had 41 600 (+1%) more jobs in the same period, with a total volume of 4.403 million jobs.

Moderately upward short-term trend

In the short term (compared with previous quarter), seasonally-adjusted employee numbers in enterprises grew by 6500 jobs (+0.1%) in the 4th quarter 2024. In the same quarter, there was a slight upward trend in the secondary sector, with 600 additional jobs (+0.1%), while the tertiary sector saw an increase of 5800 jobs (+0.1%).

Number of vacancies declined

Enterprises reported a total of 90 500 vacancies in the 4th quarter 2024. Year on year, this was a decline of 18 700 jobs (–17.1%). Both the secondary (–17.5%) and tertiary sectors (–17%) had fewer vacancies. Vacancies represented 1.6% of all jobs, 1.9% of secondary sector jobs and 1.5% of tertiary sector jobs.

Fewer difficulties in finding skilled workers

Difficulties in the recruitment of skilled workers (weighted by number of jobs) declined in 4th quarter 2024 in comparison with the same quarter of the previous year (37.6%; -2.5 percentage points).

Somewhat gloomy employment outlook

The share of enterprises announcing an increase in the number of jobs in the short-term was 11.7% in 4th quarter 2024 (12.5% in the same quarter of the previous year) weighted by number of jobs. Those planning to reduce their workforce represented 4.7% (4% in previous year's quarter). The employment outlook indicator fell again slightly compared with the previous year (1.04; -0.9%).

Methodological appendix

The employment barometer reflects changes in certain economic indicators of labour demand. The indicators are based on a quarterly sample survey of approximately 18 000 enterprises with a total of 65 000 secondary (industry and construction) and tertiary (services) sector businesses.

The **jobs** in all enterprises are divided into four employment categories. For people with more than one job, each job is counted separately. Jobs with a weekly working time of less than six hours (work-time percentage of less than 15%) are also included. Jobs in private households and those with reduced working hours are not included.

Full-time equivalents represent the total volume of all jobs converted into full-time jobs.

Seasonal adjustment neutralises the effects of seasonal factors in a time series. The entire time series is recalculated for each new quarter.

Vacancies are newly created, unoccupied or vacant positions that an enterprise intends to fill immediately or in the near future and for which active recruitment steps have been taken. Results from NOGA division 78 'Employment activities' (recruitment and placement agency activities) are not included. The percentage of vacancies is the ratio of vacancies to labour demand (occupied jobs + vacancies) i.e.: *Percentage of vacancies = vacancies / labour demand x 100*

Difficulties in recruiting personnel: At the end of the reporting quarter, enterprises indicate whether the personnel they were looking for were found easily, with difficulty or not found at all. The results are published in summarised or detailed form for each level of education and weighted either by the number of businesses or by their number of jobs.

Employment outlook: Enterprises indicate whether they are planning to maintain, increase or reduce their workforce in the next quarter. The employment outlook indicator is based on their answers on a scale of 0.5 (reduction) to 1.0 (status quo) to 1.5 (increase).
