Employment barometer in 2nd quarter 2025

Increase in employment in 2nd quarter 2025

In the 2nd quarter 2025, total employment (excluding agriculture) in Switzerland rose by 0.6% compared with the same quarter of the previous year (seasonally adjusted, +0.1% over previous quarter). Enterprises reported 10.0% fewer vacancies than a year earlier. Difficulties recruiting skilled workers have declined and employment prospects are up, despite enterprises' cautious assessment. These are some of the latest findings from the Federal Statistical Office (FSO).

Enterprises in Switzerland reported 5.532 million jobs in the 2nd quarter 2025. This corresponds to an increase of 35 400 (+0.6%) year on year. Women made up 46.7% of the workforce. At the end of the 2nd quarter 2025, 2.286 million jobs were part-time (women accounted for 69.4% of these jobs). In full-time equivalents, the total volume of employment was 4.320 million jobs (women accounted for 40.6%). This was 21 000 full-time equivalents more than the previous year (+0.5%).

Secondary sector employment (industry and construction) fell in the 2nd quarter 2025 compared with the same quarter of the previous year, by 4 600 jobs (−0.4%) to 1.129 million jobs. The tertiary sector (services) had 40 000 (+0.9%) more jobs in the same period, with a total volume of 4.402 million jobs.

Upward short-term trend

Compared with previous quarter, seasonally-adjusted employee numbers in enterprises grew by 4 900 jobs (+0.1%) in the 2nd quarter 2025. In the same quarter, there were 2 800 fewer jobs (−0.2%) in the secondary sector, while the tertiary sector saw an increase of 6 700 jobs (+0.2%).

Number of vacancies declines

Enterprises reported a total of 93 200 vacancies in the 2nd quarter 2025. Year on year, this was a decline of 10 400 jobs (−10.0%). Both the secondary (−14.2%) and tertiary sectors (−8.8%) had fewer vacancies. Vacancies represented 1.7% of all jobs, 1.7% of secondary sector jobs and 1.6% of tertiary sector jobs.

Fewer difficulties in finding skilled workers

Weighted by number of jobs, difficulties in the recruitment of skilled workers declined in 2nd quarter 2025 in comparison with the same quarter of the previous year (37.1%; -2.2 percentage points).

Somewhat gloomy employment outlook

The share of enterprises announcing an increase in the number of jobs in the short-term was 11.0% in the 2nd quarter 2025 (12.3% in the same quarter of the previous year), and those planning to reduce their workforce represented 4.3% (3.7% in previous year's quarter). The employment outlook indicator has fallen (-1.1 percentage points) compared with that of the previous year, but remains positive (1.04).

Revision of calculation methods

The calculation methods for the Job Statistics have been updated. Owing to methodological changes (gender-specific calibration), all published time series have been revised starting from the 2nd quarter 2018.

Methodological appendix

The employment barometer reflects changes in certain economic indicators of labour demand. The indicators are based on a quarterly sample survey of approximately 18 000 enterprises with a total of 65 000 secondary (industry and construction) and tertiary (services) sector businesses.

The **jobs** in all enterprises are divided into four employment categories. For people with more than one job, each job is counted separately. Jobs with a weekly working time of less than six hours (work-time percentage of less than 15%) are also included. Jobs in private households and those with reduced working hours are not included.

Full-time equivalents represent the total volume of all jobs converted into full-time jobs.

Seasonal adjustment neutralises the effects of seasonal factors in a time series. The entire time series is recalculated for each new quarter.

Vacancies are newly created, unoccupied or vacant positions that an enterprise intends to fill immediately or in the near future and for which active recruitment steps have been taken. Results from NOGA division 78 'Employment activities' (recruitment and placement agency activities) are not included. The percentage of vacancies is the ratio of vacancies to labour demand (occupied jobs + vacancies) i.e.: $\text{Percentage of vacancies} = \text{vacancies} / \text{labour demand} \times 100$

Difficulties in recruiting personnel: At the end of the reporting quarter, enterprises indicate whether the personnel they were looking for were found easily, with difficulty or not found at all. The results are published in summarised or detailed form for each level of education and weighted either by the number of businesses or by their number of jobs.

Employment outlook: Enterprises indicate whether they are planning to maintain, increase or reduce their workforce in the next quarter. The employment outlook indicator is based on their answers on a scale of 0.5 (reduction) to 1.0 (status quo) to 1.5 (increase).
